

## FAMILY OF LOW-POWER RAIL-TO-RAIL INPUT/OUTPUT OPERATIONAL AMPLIFIERS

### ■ DESCRIPTION

The UTC **LV2464** is a quad low-power rail-to-rail input/output op amplifier with low supply current (500 $\mu$ A/op) and low voltage (2.7-6V), that can be designed into a wide range of applications.

The UTC **LV2464** has a guaranteed 1.6V/ $\mu$ s slew rate and low supply current. Rail-to-rail output and high output current make the IC's ideal for buffering analog-to-digital converters. And the input common-mode voltage range including ground and V<sub>CC</sub>. Besides, they are also able to driving large capacitive loads.

Good AC performance can be provided because of 6.4MHz of bandwidth and 1.6V/ $\mu$ s of slew rate. Furthermore, low input noise voltage (11nV/ $\sqrt{\text{Hz}}$ ) and low input offset voltage (100 $\mu$ V) make good DC performance.
