

Features

- Single-Supply Operation from +3V ~ +36V
- Low Offset Voltage: 5mV (Max)
- Gain-Bandwidth Product: 1MHz (Typ)
- Dual-Supply Operation from $\pm 1.5V \sim \pm 18V$
- Low Input Bias Current: 20nA (Typ)
- Quiescent Current: 500 μ A per Amplifier (Typ)
- Large Output Voltage Swing: 0V to $V_{CC}-1.5V$
- Operating Temperature: $-40^{\circ}C \sim +125^{\circ}C$
- Small Package: BL358H Available in SOP-8

General Description

BL358H operates from a single 3V to 36V supply or dual $\pm 1.5V$ to $\pm 18V$, The BL358H have a high gain-bandwidth product of 1MHz, a slew rate of 0.2V/ μ s, and a quiescent current of 500 μ A/amplifier at 5V. The BL358H is designed to provide optimal performance in low voltage and low noise systems. The maximum input offset voltage is 5mV for BL358H. The operating range is from 3V to 36V.

Applications

- Motor Control
- Battery Management Solution
- Temperature Sensors or Controllers
- Digital Multimeter
- Blu-ray Players and Home Theaters

Absolute Maximum Ratings

Condition	Symbol	Max
Power Supply Voltage	V _{CC}	±20V or 36V
Differential input voltage	V _{I(DIFF)}	36V
Input Voltage	V _I	-0.3V~36V
Operating Temperature Range	T _{opr}	-40°C ~+125°C
Storage Temperature Range	T _{stg}	-65°C ~+150°C

Note: Stress greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions outside those indicated in the operational sections of this specification are not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Electrical Characteristics

(At $V_S = +15V$, $T_A = 25^\circ C$, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	BL358H			
			TYP	MIN/MAX OVER TEMPERATURE		
			+25°C	+25°C	UNITS	MIN/MAX

Differential amplifier

The differential amplifier allows the subtraction of two input voltages or cancellation of a signal common to the two inputs. It is useful as a computational amplifier in making a differential to single-end conversion or in rejecting a common mode signal. Figure 1. shown the differential amplifier using BL358H.

Figure 1. Differential Amplifier

$$V_{OUT} = \left(\frac{R_1 + R_2}{R_3 + R_4} \right) \frac{R_4}{R_1} V_{IN} - \frac{R_2}{R_1} V_{IP} + \left(\frac{R_1 + R_2}{R_3 + R_4} \right) \frac{R_3}{R_1} V_{REF}$$

If the resistor ratios are equal (i.e. $R_1 = R_3$ and $R_2 = R_4$), then

$$V_{OUT} = \frac{R_2}{R_1} (V_{IP} - V_{IN}) + V_{REF}$$

Instrumentation Amplifier

The triple BL358H can be used to build a three-op-amp instrumentation amplifier as shown in Figure 2. The amplifier in Figure 2 is a high input impedance differential amplifier with gain of R_2/R_1 . The two differential voltage followers assure the high input impedance of the amplifier.
