4. Test circuit

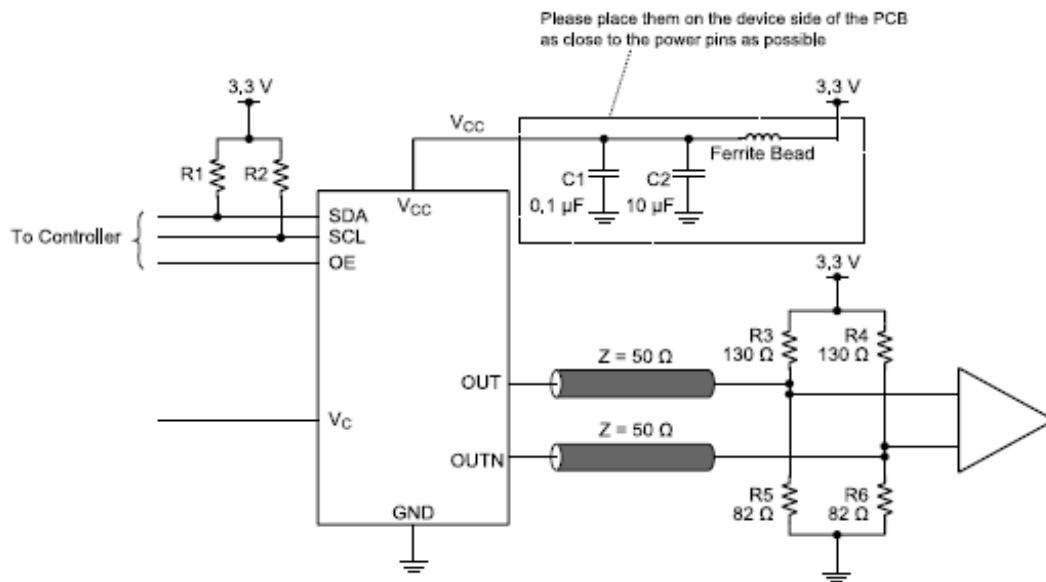

1) Condition

This figure shows an example of this product's application schematic.

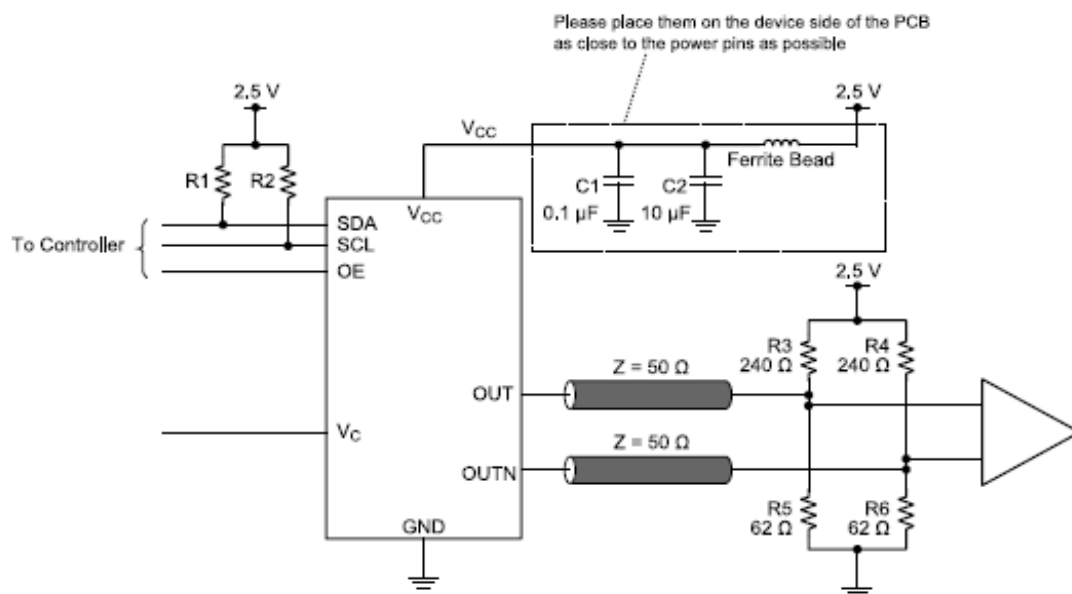

As with any high speed analog circuitry, the power supply pins for VG7050EAN are vulnerable to noise. In order to achieve optimum jitter performance, power isolation with filter device is required for power supply pins.

In order to achieve best performance of the power isolation filter, it is recommended that the filter composing devices is placed on the device side of the PCB as close to the power pins as possible. The component value of this filter is just an example, it may have to be adjusted.

2) $V_{CC} = 3.3V$

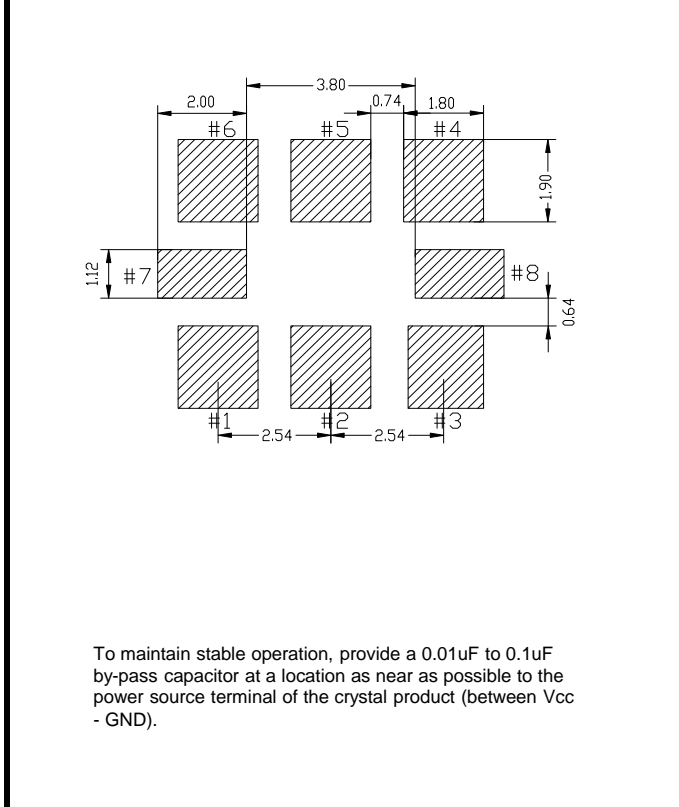

3) $V_{CC} = 2.5V$
